

RACHEL TRAINOR

COMPUTER SCIENCE GRADUATE | SOFTWARE | DATA | CYBERSECURITY | IT

Virginia | GitHub: github.com/RachelTrainor | Portfolio: RachelTrainor.github.io

PROFESSIONAL SUMMARY

Computer science graduate with hands-on experience in software development, databases, cybersecurity, networking, and data. I enjoy figuring out how things work, solving practical problems, and learning new technologies by actually building with them. My background in asset protection also gives me real-world experience with access control, monitoring, risk awareness, safety and compliance, incident documentation, and responding when something does not look right. I am looking for an early-career technology role where I can keep learning, contribute to useful solutions, and continue growing my technical skills.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, HTML, CSS

Development: Android Studio, Visual Studio, Git, GitHub, Android development, web development, REST APIs

Databases & Data: SQLite, MongoDB, database design, CRUD operations, data analysis, reporting, Microsoft Excel

Security & Networking: Information security, network security, secure development, access control, risk assessment, firewalls, VLANs, DHCP, DNS, routing

Technical: Troubleshooting, root cause analysis, software testing, debugging, technical documentation, process improvement

PROJECTS

Weigh To Go - Android Weight Tracking Application

Java | Android Studio | SQLite

- Built an Android application with login and registration, persistent weight records, goal tracking, progress analytics, and SMS goal notifications.
- Implemented add, edit, delete, and read operations with SQLite, stronger input validation, safer deletion, and improved permission and failure handling.
- Added a WeightRecord model, ArrayList-based record handling, sorting by date and weight, and calculations for starting/current weight, average change, recent trend, and goal progress.

TravlR - Full-Stack Travel Management Web Application

MongoDB | Express.js | Angular | Node.js | JavaScript | REST API | JWT

- Developed a MEAN-stack travel application with a public-facing site and an Angular administrative interface.
- Built REST API functionality and MongoDB-backed CRUD operations for travel data.
- Used JSON Web Token authentication to support protected administrative access and secure application workflows.

Secure Spring Boot API

Java | Spring Boot | SHA-256 | HTTPS

- Enhanced a Spring Boot application with SHA-256 checksum verification and HTTPS to strengthen data integrity and secure communication.
- Reviewed software security concerns and documented secure-development improvements as part of a software security assessment.

Network Design & Security Labs

Cisco Packet Tracer | VLANs | NAT | DHCP | Routing | Network Security

- Designed and documented segmented networks using VLANs, IP addressing, DHCP, NAT, routing, and firewall/security concepts.
- Completed network and information-security projects involving guest Wi-Fi segmentation, risk analysis, access controls, incident analysis, and secure configuration.

EXPERIENCE

Asset Protection Associate - Sam's Club Supply Chain / Distribution Center

2026 - Present

- Monitor access and security activity in a distribution environment and help protect people, property, inventory, and operations.
- Perform safety and food-safety audits, identify potential risks, document findings, and follow established security and compliance procedures.
- Use access-control and surveillance processes, investigate inventory discrepancies, document incidents, and communicate important information to the appropriate teams.
- Support emergency and workplace-safety processes while working across departments in a fast-paced operation.

Overnight Stocker - Walmart

2022 - 2026

- Worked in a fast-paced overnight operation where accuracy, safety, organization, and meeting deadlines were important every shift.
- Built strong teamwork, problem-solving, and process-following skills while adapting to changing priorities and workload.

EDUCATION

Bachelor of Science in Computer Science - Southern New Hampshire University

Coursework and projects included software engineering, algorithms and data structures, databases, full-stack development, Android development, networking, software security, information security, and computer graphics.
